

# The Danapad

The Danapad is a wireless, smart access keypad that lets you operate your Danalock without a smart phone. With its elegant Danish design and advanced encryption algorithm the Danapad presents an elegant and secure way to wirelessly control and share access to your home.

## Using the Danapad

You no longer have to bring a key or a phone when you leave home. You can just use a personal pin code to unlock your home. Give your children and family personal pin codes as well and never worry about anyone losing a key again!

If the lock is operated by many different guests - e.g. by a rental property or a locked off common area - some guests might not own a compatible device. With the Danapad, a compatible device is not needed. The guests simply press the pin code that you have created from the Danalock app to unlock the door.

When you have a Danapad it is no longer necessary to give away keys or require use of an app to let contractors and home services into your home. Set them up as temporary guests and the pin code will work when planned.

## Features:

- Easy to install - no permanent alterations on your door necessary
- Pin codes can be time-restricted for single use access or recurring guests
- Easy Management of pin codes in the Danalock App
- Made for mounting outside - weather and water resistant
- Operate the Danalock with Danapad pin codes and the Danalock App at the same time

## Specifications:

### Pin code length:

Up to 10 digits

### Dimensions:

35mm x 82 mm

### Weight:

120 g

### Mounting:

2 screws or adhesive tape

### Communication:

Bluetooth BLE 4.0

### Power:

4 AAA batteries

### Encryption level:

AES256
