

SVEN The digital assistant for your home

The intuitive digitalSTROM visualisation

SVEN is an intuitive, graphical interface for buildings with digitalSTROM architecture. The 7" touch screen with an optional intercom feature presents an ideal solution for smart apartments.

A life with SVEN

digitalSTROM is now also available for apartment buildings. Tenants can easily access their home using a touch screen and save many walks. They can now directly reserve the laundry machine in the basement or the charging unit for the electric car using SVEN. When the door bell rings, SVEN turns into a video intercom.

The system creates new and more efficient ways for rental agencies and real estate administrators to manage their properties.

SVEN Basic

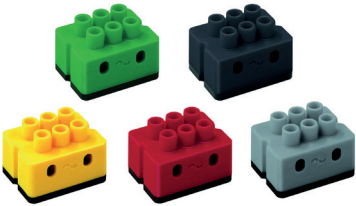

SVEN gathers the digitalSTROM features on an intuitive, controllable screen. These include not only the regulation of temperature or light and shade, but also additional online and weather services.

The cost-effective system SVEN also provides new possibilities for rental administrations. Thanks to individual communication with the tenant, information can be more easily exchanged, thus enabling living in the future.

SVEN GSA

Besides all features of SVEN Basic, SVEN GSA also provides a video intercom. If somebody rings your door bell at the entrance, SVEN emits an audiovisual signal using the built-in LED light and displays you the visitor on the screen.

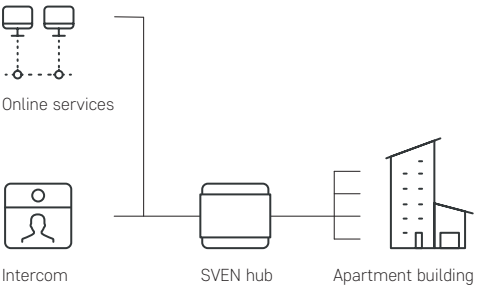

This is possible thanks to SVEN hub, which connects all the individual digitalSTROM smart homes of the house with the intercom.
